

Coloration product

GILDING WAX

Very fine metallic particles, coated with a wax binder. Suitable for glass and metal. The use of gilding waxes allows to create a beautiful high value contrast.

Color	Packaging type	Ref.
Gold	Unit - 30 mL (1 oz)	86550
Silver		86551

ODORLESS MINERAL SPIRIT

Bottle - 245 mL (8.3 oz)

Ref. **86552**

This spirit helps remove gilding wax surplus around the engraving and clean the tools (spatula, brushes).

Odorless, it presents no risk of irritations or allergies.

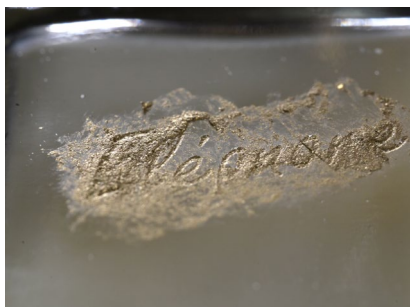

1 - Engrave your item

Engrave your glass, metal or even plastic item with a rotary machine. The gilding wax application does not require a deep engraving. However, the deeper the engraving depth, the easier it will be to use the wax.

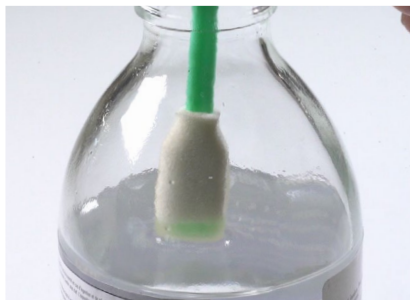

2 - Apply the gilding wax

Take a small amount of gilding wax from the container with a beveled cotton swab (Ref. 75167) and apply it to the engraving as precisely as possible. Indeed, the more meticulous and precise your application, the easier and faster the cleaning of the object will be.

3 - Let the wax dry

Let the wax dry for a few minutes (between 3 and 5) before cleaning

4 - Clean your item

Finally, clean around the engraving with a large and flat cotton swab (Ref. 75163). It is best to soak the swab with the odorless mineral spirit to make it easier to clean the gilding wax from the surface without rubbing. The more you rub, the more you may remove the wax from the engraving.
